

THE MODULAR CONTROL SOLUTION

FOR PRODUCTION CONTROL, MONITORING AND
PROCESS ANALYSIS

WAIvisionplus

The new generation of the master computer system enables an automated display of all production-relevant information for a workstation, relieves the user by means of a digital display and supports them in keeping an eye on complex processes. In addition to the detailed information display for production units and elements, WAIvisionplus offers various reporting options for monitoring and optimizing the circulation process. The modules can be combined individually or used as a complete package as required. In this way, WAIvisionplus enables end-to-end efficient production control, production monitoring and process analysis.

RECIRCULATION CONTROL

ProductionManager

- Verification and visualization of CAD data
- Preparation of data for production
- Efficient production planning and order management
- Automatic or manual occupancy of the pallet by drag and drop
- Automatic and manual provision of the pallets
- Automatic generation of production-relevant working papers, occupancy-specific data sheet and labels
- 3D Viewer of the elements

VISUALIZATION AND MONITORING

ProductionController

- Control of production systems via ERP system
- Integration of suppliers / prefabricated systems via interface
- Visualization and monitoring of the circulation stations
- Occupancy overview curing chamber
- Manual control of pallet production, time data and association data
- A Trouble Shooting Assistant for process monitoring, error analysis and troubleshooting
- Webflow offers visualization options for process monitoring on all common mobile devices

REPORTING

ProductionAnalyzer

- ➔ Automated display of all production-relevant Information about the respective workplace
- ➔ A detailed view of the production units and / or elements via zoom function
- ➔ Real-time information sharing in the production process
- ➔ Display of the production status of the system stations
- ➔ Reporting of production-relevant key performance indicators
- ➔ Dashboards
- ➔ Identification of bottlenecks and possibilities for optimization
